Scheme 1: Single MEO Satellite (i = 55-65 deg, h = 18,000-25,000 km, T = 12h 2:1 resonance)
3 Time-Sequential Visibility Passes -- Global Optical Clock Comparison via Intercontinental Common-Visibility Corridors

Orbit: 2:1 resonance (Earth 1 rev, SAT 2 revs = 24h daily repeat) | Footprint radius ~61.6 deg (15 deg min. elev @ 20 km) | Omega_0 = 113 deg E | Doppler +/-0.70-1.25 km/s | 3 corridors: Asia-Europe, Europe-Americas, Americas-Asia | + Australia link | All common-visibility windows >30 mi

All stations
(incl. Paris & NPL):
+/-0.70 ~ 1.25 km/s
(peak: h=18,000 km
high-latitude sites)
